Wired Network - Check Registered Devices in NetReg

Action

To check computers and other devices registered to you in NetReg, the University's wired network access tool, follow the steps below.

Instructions

1. Go to https://netreg.albany.edu and click the green Enter button
2. Enter your NetID and password and click Sign In or OK
3. You will see a table of devices registered to you with details about each device:
   - Hostname: The network name of the device
   - Hardware address: The unique ID assigned to the device's network card. See also Network - Find hardware network (MAC) address.
   - Mode: Static or Dynamic IP address. Static will always have one IP address while Dynamic will change IP address periodically.
   - IP Address: The assigned network address, if the mode is set to Static. See also Network - Find IP address.
   - Subnet: The area in which it is registered, typically a building or floor
     - Devices are allowed to be registered in multiple Subnets
4. To edit a device's details, click on the Hostname link for it.
   To add a device, click the Register New Machine link near the top and follow the steps at Wired Network - Register a Computer in NetReg.
