Confluence Values in Forms

Action

When creating a wiki form, you can use Confluence Values to gather information about the form submitter automatically.

Instructions

The following Confluence Values are available for forms:

- `$user.name` (Returns the submitter's NetID)
- `$user.fullName` (Returns the submitter's full name)
- `$user.email` (Returns the submitter's email address)

To use one of these, insert the appropriate value into a form's input macro in the attribute Value or a Confluence Value:
