Network and Connectivity Management

The architecture, installation and operation of infrastructure requirements for connecting to the University network.

**Residential Network (ResNet)**

Wired and wireless network connections for occupants of all University residence halls.

**Virtual Private Network (VPN)**

The Virtual Private Network (VPN) provides secure connection to the University network from off-campus locations.

**Wired Service**

Access to the University network using a wired connection.

**Wireless Service**

Access to the University network using a wireless connection.
