Wiki Formatting Macros - Horizontal Navigation

Functionality

Horizontal Navigation is a pair of macros that allows you to add an interactive AUI-styled horizontal navigation bar, making content easier to navigate and digest. Start by adding the Horizontal Navigation Bar macro to your page. This acts as a container for your navigation bar pages. Then add multiple Horizontal Navigation Bar Page macros for each page of content.

Recommended Replacement

There is no direct replacement for this functionality in Confluence at this time. One option is to set up your tabbed content as sections on your page and then use the Table of Contents Macro to create a navigable menu. Another option is to create separate child wiki pages, and use the Children Display macro to create a dynamic menu of child pages.
