Blackboard Content Editor Line Spacing

Issue

The content editor appears in many locations throughout Blackboard Learn. (i.e. sending announcements, creating discussion posts, journals, etc.). Line spacing issues have been noted when typing and formatting text within the content editor. The end result, depicts different line spacing than the original format you typed into the editor. It is not WYSIWYG. Utilizing the ‘Preview’ button icon also does not display your true end result.

Workaround

Utilize the following tips when composing lines and paragraphs of text.

1. Pressing Enter inserts a double line break and starts a new paragraph.
2. If you want a single line break, press Shift + Enter rather than Enter or Return.
